- Installation of Standard and Pre-Packed Small Diameter Wells (up to 2") using direct-push methods.
- Injection of Remediation Compounds
- Limited Access Direct-Push Unit Available Upon Request
- Soft Dig Available Upon Request

S2C2 is an environmental services firm that focuses on providing High Resolution Site Characterization (HRSC) support. At S2C2, we stand committed to excellence in environmental services, setting a benchmark that elevates us above our competition. Our team comprises top environmental specialists and experts who possess a deep understanding of the industry's latest advancements and best practices, enabling us to provide innovative, customized solutions that outpace traditional approaches. We use with Geoprobe® direct-push units to advance our direct-sensing tooling and to collect soil, groundwater, and soil vapor samples.

Collecting representative soil and groundwater samples is critical for confirming direct-sensing data and for providing representative samples for site characterization. We have the experience, equipment and tooling to collect representative samples in even the most challenging conditions. We know that successful and cost-effective environmental remediation programs heavily depend upon properly conducted characterization efforts. We are committed to providing complete and accurate streamlined site characterization programs in the most cost-effective manner possible.
